

Child from **LEAD**

# Lead May Be In Your Home!

Lead is found in homes built before 1978 and many everyday items that you may have at work or home. Lead dust as small as a grain of sand can be enough to poison a child.

home remedies

## Get Your Child Tested

Children younger than 6 years old are at the most risk for lead poisoning.

Ask your child's doctor for a lead test at your next visit. Testing is free for Medicaid beneficiaries and is covered by most insurance.
