Peter Navarro, Ph.D. Assistant to the President and Policy Coordinator, National Defense Act The White House 1600 Pennsylvania Ave NW Washington, DC 20500

The Honorable Robert P. Kadlec Assistant Secretary for Preparedness and Response Department of Health and Human Services 200 Independence Ave, SW Washington, DC 20201 The Honorable Pete T. Gaynor Administrator Federal Emergency Management Agency 500 C St. S.W. Washington, DC 20472

Dear

19 pandemic. We are appreciative of the initial steps that the Administration has taken in recent days to address this shortage. However, it is already clear that current policy is not sufficient to fully address this crisis and additional, urgent action is required to protect the public's health and save lives.

This nation's hospitals are experiencing a crisis-level shortage of medical equipment, and the Administration has acted in recent days to address this need. On Friday, March 27, President Trump invoked the Defense Protection Act (DPA) to compel General Motors Company to accelerate production of ventilators.<sup>1</sup> The Administration, working with private partners, has also arranged for shipments of medical supplies from China to areas most affected by the COVID-19 virus.

The Food and Drug Administration (FDA) has issued emergency approval of the use of certain devices that can be converted into ventilators.<sup>4</sup> Additionally, FDA has allowed emergency use authorization of new sterilization techniques that allow for certain PPE to be reused.<sup>5</sup>

Despite these important actions, there are still far too many providers on the front lines without the protection needed to save lives without unduly endangering their own.<sup>6</sup> Patient health is jeopardized as well when providers cannot access the supplies they need. In the midst of this shortage, providers have been forced to resort to potentially dangerous tactics, such as splitting ventilators between two different individuals or reusing masks, that exacerbate the risk for everyone involved, including patients.<sup>7</sup> Policy interventions thus far have also largely been limited to increasing the manufacture of needed supplies. Increasing the supply only helps, however, if there are clear, fair, efficient and predictable ways to purchase and distribute both current stockpiles and supply that will be manufactured. Reports from governors, healthcare providers, public health professionals and first responders across the nation have made clear there are not.<sup>8</sup>

Our organizations urge the federal government to do significantly more to facilitate the timely manufacturing and distribution of ventilators and PPE through a process that is transparent, equitable,

based on need and is non-competitive. A streamlined and predictable supply chain must emerge that is capable of lasting the duration of the pandemic.
